

WELCOME TO OUR 1ST EDITION OF SA PROCOAT

Welcome to our first edition of our monthly newsletter & I would personally like to start off by saying a heart felt thanks to all those people who have given me their time over the last 6 months. Whether supporting our vision of establishing SA Protective Coatings or as a valued client who has given there time to listen to our proposals...thanks again & I hope we have been able to add some value to your business along the way.

Whilst SA Protective Coatings was originally established as a waterproofing business our growth into all forms of protective coatings has been rapid due to our clients requirements for a suitably qualified specification, supply & application service. Over the last 3 months this part of the business has quickly equaled the waterproofing enquiries. Projects completed to date include several industrial flooring applications, the St Kilda public toilet blocks & the recent redevelopment of the Willunga community toilet facility.

Overall things are progressing tremendously well & it is largely due to the enthusiasm of the people around us, our suppliers & not forgetting our clients.

Best Regards

Andrew Lawson
Director

The latest edition to the fleet is this custom built trailer designed to carry 2x205ltr drums of product. The design has been specifically around the quick application of our flooring systems.

VOLUME 1, ISSUE 1

In this issue:

Commercial Flooring Division	1
Non Slip Surface Treatments	2
Shell Flintkote hits Adelaide	2
SA Paving Care—Protect Your Investment	2

THOUGHT OF THE MONTH—ENGLISH QUIRKS

Why is there no egg in an eggplant, no ham in a hamburger & neither apple or pine in pineapple? Why does quicksand act slowly, why is a boxing ring square & why is a guinea pig neither from Guinea or a pig?

One goose, two geese...So why not one moose, two meese? How can a slim chance & a fat chance mean the same thing but a wise man & a wise guy mean the opposite?

And if you have a bunch of odds & ends & get rid of all but one...are you left with an odd or an end?

PROTECTIVE FLOORING DIVISION LAUNCHED

SA Protective Coatings have extended their services to include commercial & industrial flooring systems.

Whilst it seems like a natural progression, finding quality products was the toughest assignment in establishing this product range.

Many protective coatings systems promise the earth but very few deliver on their promise. We are extremely confident that we have located the best of the products on offer & better still they are manufactured right here in Adelaide & come with standard warranties dependant on usage.

Examples of floors treated;

- **Non-Slip** applications
- Food processing facilities
- Livestock Industry
- Commercial & Residential Paving Coatings

-JOB BOARD-

Commercial non slip flooring used to seal & protect the toilet floors at St Kilda playground—St Kilda

RustGuard & Aluminium system as discussed in Shell Flintkote article.

Gripset & Shell combined to seal & waterproof a Sulphuric Acid tank for the ABI group at Pt Adelaide

Liquid Rubber used to seal & protect a large volume water tank

SHELL FLINTKOTE AVAILABLE NOW

As the third (3rd) largest company in the world, Shell will not put their brand to anything unless it represents 3 things— Strength, Consistency & most of all Value.

The Shell range represents an exciting & extensive value for money range for use in commercial & residential applications alike.

With products like RustGuard & Aluminium paint being a specifiable substitute for hot dip galvanising....the possibilities are almost endless, especially where existing or architectural sections are involved. RustGuard can even be applied over rusted surfaces!

A recent project involved substituting the above system in place of hot dipped Galvanising to GHD Engineering, Tagara Builders & SA Structural on the St Martins Elderly Care facility with fantastic results.

SA PAVING CARE

After establishing UrbanStone Paving in SA 8 years ago, offering advice on the sealing, care & maintenance of pavers is almost second nature.

Whether your project involves residential traffic or high volume commercial situations, SA Protective Coatings can assist in developing a specification/solution.

All coatings & sealers used are UV stable to avoid “yellowing” & come with standard guarantees. If required, all products can be made non-slip...like our flooring systems the level of slip resistance is up to you.

We offer a full restoration service from high pressure blasting (3500psi) to joint repair & sealant application.

Like our other services, we only use quality products so we might not be the cheapest but we will be the best option...long-term.

NON SLIP FLOOR—YOU CHOOSE THE GRIP!

Now that SA Protective Coatings are offering non slip commercial flooring **you** as the specifier or owner have total control of the level of slip resistance.

Whether it is a non slip floor for use in a residential building or a flooring system to prevent horses from sliding...we can develop the system & it is not as expensive as you think.

The majority of our products are quick dry & can accommodate forklift traffic within 24 hrs.

By combining quality sealing products & commercial grade abrasion resistant granules we can create several areas of abrasion resistance within the same project.

One of the most exciting parts about being involved in the protective coatings industry is that every job is different. By handing control

of the slip resistance to the client we have been able to offer something that the industry has been requesting for years.

Every project SA Protective Coatings undertakes involves understanding the end use of the substrate to ensure we develop a suitable system for the life of the structure. After concept has been agreed by both parties we will offer standard samples or create a specific sample for final client approval.

The best part about installing a SA Protective Coating floor is that you will have the confidence of knowing that we have taken the time to understand the required use of the system, that way you can concentrate on doing what you do best...your business.

As we operate 24/7, we can work to your schedule, so shut down or weekend projects can be accommodated.
