

SA PROCOAT—EDITION FOUR

Welcome to our fourth edition of SA ProCoat.

Well things have certainly kicked along since our last newsletter with three new staff members on board (a warm welcome to Regan, Adam & Brad) plus an ever expanding range of products & services.

The most exciting is the addition of a concrete treatment, repair & grinding division (refer article below).

With everyone concerned about water conservation, the introduction of **StainSeal** paver sealing has been embraced by the market. With lawn areas shrinking & paved areas expanding, how do you protect these paved areas from unsightly moss, mould, mildew, spills & stains.....for more details refer to the StainSeal feature.

If anything mentioned in the following pages (Grinding, flooring systems, sealing or AntiSKID) creates any interest, please let me know & I would certainly appreciate the opportunity to discuss our capabilities

1500m2 of StainSeal GLOSS AntiSKID at Unley Swimming Centre. With over 65,000 visitors a year...StainSeal has certainly withstood the biggest of tests!

CONCRETE GRINDING

Our latest purchase now ensures we have the capabilities to undertake all grinding in house without needing to involve third party contractors.

These services include coating removal, concrete leveling, AntiSKID abrasive treatments & polishing.

Up to date machinery ensures a professional result with minimum al disruption. By utilising dry vacuuming technology the mess is kept to a minimum & we can remove coatings from almost any surface...nothing is impossible!

FLOORING SYSTEMS

The range of available options in floor coating systems is almost as wide as the colour choices:

- **Water Based**
- **Polyurethane**
- **Epoxy**

Let us take the guess work away & help you specify an option that suits the intended usage.

This recent project (above) involved recoating the tired paths around the WEA Building in the city.

Being a 7 day operation— a solvent based product was out of the question (smells & drying time issues) so a water based option was recommended & has been extremely successful under tough conditions which includes over 60,000 users per annum.

-JOB BOARD-**COMMERCIAL OR RESIDENTIAL**

With the significant focus on safety & responsibility our AntiSKID solutions have become a rapidly growing part of our daily business both commercial & residential.

Membrane Systems have always been the a significant part of our business & this recently completed membrane for the famous "One & All" training ship further represents our desire to tackle the difficult jobs. If there's a need.....there's a solution!

ANTI-SKID

"Does your floor reach AS 3661.1...If not you could be held liable in the event of a slip or fall?"

OH&S should always be paramount in everyone's thinking & protecting those around you whether it be family, friends, staff or customers from slips & falls is essential.

Here are a couple of scary facts about slips & falls:

- **Slips & falls are the number 1 cause of claims & injuries in public places (restaurants, hotels, shopping malls, general businesses). Only car accidents are higher!**
- **Up to 75% of employee LTI's are due to work injury is as a direct result of slips & falls**
- **Slips & falls account for over 50% of household accidents**

The good news is that SA Protective Coatings can help. With our vast range of treatments we can make ABSOLUTELY ANY surface AntiSKID. A recent project involved creating a coating for mild steel checker plate to remove the slip risk for children & parents using school koala crossings for a local council & the department of road transport.

"IN MOST CASES THE SURFACE IS ACTUALLY SAFER WET THAN DRY!"

So if you have a *slippery situation*...give us a call & I guarantee we can help you design a solution for a lot less than the cost of a Loss Time Injury or court settlement.
Stop the SLIP.....Remove the RISK!

COMMERCIAL**STAINSEAL****RESIDENTIAL**

Whether it's a commercial or residential application, our range of natural & gloss protective coatings for paving & concrete makes sense. Simply put "**StainSeal is cheap insurance against spills & stains**".

For a fraction of the purchase price (normally around 7%) you can protect your investment from unsightly spills & mildew build up for up to 7 years.

Sealing is a simple yet cost effective way to protect your pavers or concrete & keep them looking like new for longer!

Considering the water restrictions, sealing pavers make sense as you can no longer hose down concrete areas... a gloss sealed paver behaves similar to an outdoor tile making cleaning easy with a cloth, mop or bucket of water.

Using StainSeal Gloss also helps to *pull* the colour from your pavers giving them a richer, more attractive appearance. For more information give us a call or visit our website.
