

SA PROCOAT—EDITION TWO

Welcome to our second edition of SA ProCoat.

We have seen a few changes since August but the most exciting has been the rapid progress we have made in securing key contracts with several councils & government organisations.

With the growth of our floor coatings division we have recently purchased new high pressure cleaning equipment which will position us perfectly to handle any preparation or cleaning projects professionally & with minimal waste water finding its way into our storm water (for a detail summery please refer to our story on page 2).

As a result of our council contracts SA Protective Coatings have now branched into Anti-Graffiti coatings with great success. With a choice of products *you* can decide on the quality of coating, along with the life cycle you need out of the film. Our Gold range will take up to 100 applications of Graffiti before re-coating is required.....That means if the same spot was unlucky enough to get “tagged” once a week, it would still be going strong in 2 years!

I look forward to catching up with you all soon.

Best Regards

Andrew Lawson
Managing Director

Latest Addition to the fleet — 8 x 4.5 ft custom manufactured application trailer

TREKKING KOKODA—OCTOBER 2006

During October 2006 I was fortunate enough to join 14 other South Australians on the adventure of a lifetime in a 10 day slog of the famous Kokoda Trek in Papua New Guinea.

Our journey was filmed as part of a documentary to air on Channel 9 on Anzac Day 2007 paying pilgrimage to the great people who fought to protect the life we enjoy today.

Whilst impossible to put into words; I can say that I am extremely proud of the feats of our Australian soldiers during this & the other great battles fought. The experience whilst extremely difficult, will live with me as one of the greatest achievements of my life. Even after walking the 96km trek, I still find it hard to imagine undertaking that walk whilst dogging enemy soldiers & bullets in 2 month old socks with little or no food.....**Lest we Forget!**

RE-VAMPED—WWW.SAPROCOAT.COM.AU

With the internet becoming a valuable tool in communicating with current & potential clients www.saprocoat.com.au has recently gone through a major upgrade to make it more “user friendly” & ensure that all relevant company information is available at the click of a mouse.

Amongst the new features is a **Gallery** page visually highlighting projects & services featuring. They key addition is the series of before & after shots.

Another new inclusion is the **Job Profile** page which highlights the capabilities of our water proofing

division through a series of real life projects.

Product & Material Safety Data Sheets on our full range of Shell Flintkote products can now also be downloaded directly from www.saprocoat.com.au

-JOB BOARD-

Before & After results of our **floor coating systems**. Top right shows the original , top left after being cleaned ready for application & the final results above. A great result both visually & practically with a non slip finish being achieved!

Anti-Graffiti works at the Prospect Oval. The end result has also worked as a deterrent with no graffiti recorded since application in December.

The applications for waterproofing membranes are almost endless. One of the trickier of late was a sump project in the basement of an inner city building.

After high pressure cleaning both tanks, removing the loose wall render & finally re-rendering the walls we applied 3 coats of flexible water based rubber membrane to seal the tanks.

The challenge with this project was both access & the need to keep 1 tank running at all times. The end result was an outstanding success with both client & end user happy with the result.

The moral to this story is.....*If it doesn't move we can probably rubberise it!*

STAIN REMOVAL & SEALING

Whether the surface is concrete, paving, polished concrete, terrazzo, marble or for that matter & flooring surface we have the facilities & expertise to high pressure clean & seal to ensure the area looks as good in 5 years as it does today.

With our high pressure cleaners, environmentally friendly waste vacuuming systems & surface cleaners, SA protective Coatings can bring most surfaces back to their former glory & then treat with a sealer (natural, gloss or non-slip) to ensure that staining is a thing of the past.

All our products are designed to be maintenance free & offer an extended life cycle in commercial or residential applications.

For more information please contact Andrew or sales@saprocoat.com.au.

FLOORING DIVISION & WATER RESTRICTIONS

With water recycling & conservation being at the top of most peoples list today we have invested a significant amount of money into machinery that allows us be more effective with how we use water.

The Whirlaway scrubber (above) is a significant investment but allows us to capture approximately 75% of he water we use for re-use in garden beds or lawn areas. This is obviously important in terms of recycling water but just as importantly it ensure that potential pollutant materials

cleaned from the substrate do not find their way into our waterways.

As holders of all relevant Class 3 water restriction permits we are legally covered by SA Water to undertake any form of high Pressure cleaning prior to sealing & in order to apply top coats of flooring products—Polyurethanes, Epoxies, clear paving sealants etc.

Under our permits we are also licensed to clean up areas were health & safety issues are present (slipping concerns through oil spills, material build up etc).
